

Ad Campaign Turnaround — VitalCare Wellness

Simulated Google/Meta Ads audit and recovery case study

The Problem

VitalCare Wellness, an established daily immunity/multivitamin supplement brand (~\$40-50L/month revenue), saw cost-per-customer rise and return on ad spend decline steadily over 6 months, despite no change in product or pricing.

Diagnosis

Primary cause: creative fatigue. The same 3 ad creatives ran unchanged on Meta and Google for 8+ months. As the same audience saw the same ads repeatedly (high frequency), engagement dropped ('ad blindness'), forcing higher spend to reach the same number of people — driving cost per customer up and ROAS down.

The Fix

Primary: Creative refresh — 5-6 new ad variations (video, carousel, UGC-style) across 3 messaging angles (convenience, ingredient-transparency, habit/social proof), refreshed every 3-4 weeks going forward.

Plus: Audience expansion — lookalike audiences from existing customers, adjacent interest layers, and geographic expansion — layered on only after creative is fixed, so it compounds recovery instead of masking the root cause.

New Ad Concepts

All copy avoids restricted health claims ('cures', 'prevents', 'treats') in favor of compliance-safe 'supports' language, with required disclaimers on every ad — standard practice for supplement advertising on both platforms.

Rebuilt Campaign Structure

Meta campaign	Budget	Audience
Creative Reset (cold)	40%	Existing cold interest targeting, new creative
Lookalike Expansion	30%	1-3% lookalike from 6mo purchasers
Retargeting	20%	Site visitors, video viewers, cart abandoners
Interest Expansion (test)	10%	Adjacent wellness/fitness interests

Phased Rollout

Phased rollout isolates which fix drives recovery — creative launches alone first, before audience expansion is layered in — rather than changing everything at once.

Projected Recovery

Headline number: ROAS projected to nearly double (1.8x → 3.2x) from fixing creative fatigue alone — without increasing total ad spend. Benchmarks based on Meta's published creative fatigue research, not invented figures.

This project demonstrates paid-media diagnostic skills — auditing an underperforming account, isolating root cause, and rebuilding campaign structure with a phased, testable rollout — complementing the CRM Lead Nurture and forhim. full-funnel projects in this portfolio.

Built by Shreya M.S. (Po) — applying diagnostic, trigger-logic, and full-funnel marketing thinking to a paid-media turnaround scenario.
